Changes from Track Test v2 (highlighted). Reverse only, for more hold and less transition

- **Forward:** unchanged from v2
- **Reverse oil start:** about 26 ft now **about 28 ft**. Brush drop stays at 30 ft
- **Reverse 10L-10R:** 3 loads now **4 loads**. Reverse finish stays near 7.2 ft
- **Reverse oil reach (estimated):** boards 12 and in ~28 to 20 ft. Boards 10-11 ~20 to 12 ft
- **Volume:** 30.15 to 31.20 mL. **Outside ratio:** 9 to 9.33. Boards 2-9 unchanged

Oil per board, uL (forward below, reverse on top)

Before running: enter the table in the IKON, read back the real distances, and write them under ACTUAL END. Start, End and Feet here are estimates from the BEP House 26 sheet, so the machine's numbers replace them. The reverse is estimated to finish near 7.2 ft. If hits turn weak or balls skid late, move the reverse start back to 26 ft first. Volumes and ratios are calculated from settings, not lane tapes. The lane map shows direct loads only, not the oil actually on the lane. Test on one pair for 2-3 nights, with a comparison pair on the pattern you are running now.
